Bones in the Human Body human body bones name

The humerus is one of the long bones in the human body. It joins the scapula, technically the whole body, to the forearm. The humerus has bone marrow just as the other long bones, and this is used as a site for production of blood cells, together with its function of providing a surface area for attachment of biceps and triceps muscles. The humerus, at its lower end, is jointed to the ulna and radius at the elbow.

Types of Joints innerbody com

The shoulder and hip joints form the only ball and socket joints in the body. These joints have the freest range of motion of any joint in the body they are the only joints that can move in a full circle and rotate around their axis. However, the drawback to the ball and socket joint is that its free range of motion makes it more susceptible to dislocation than less mobile joints.
